

Please come to Energy Facility Siting Board hearing on burying the waterfront power lines on Thursday, March 2, 9:30AM, 89 Jefferson Blvd, Warwick.

Please let us know at friendsindiapointpark@gmail.com if you're coming to the hearing.

We are encouraged by Governor Raimondo and Providence Mayor Elorza taking action to support a feasibility study of attaching the wires to the bridges over the Providence and Seekonk Rivers (and burying them on the land in between), which would save money by avoiding digging under the rivers.

Come for an hour and bring a friend. The Board notices and comments on our presence. Bring a simple sign: write "DISAGREE" on a piece of cardboard to hold up when someone speaks against burying the wires.

And please take a minute to thank the Governor and Mayor for their support with a **short email** to governor@governor.ri.gov and mayor@providenceri.gov. See 1-p fact sheets on our website for more info.

The future of our waterfront is at stake: National Grid wants to replace 100-year-old towers with new ones, which would dominate our waterfront for another century!

Thank you for your support. Together we can remove the unsightly towers, make the head of the Bay more appealing to visitors, and enhance both our economy and our environment!

NOTE: Let us know at friendsindiapointpark@gmail.com if you no longer want to receive emails about the power lines.
